

TOP LANGUAGES BY COUNTY

Counties in the United States: 3,141

322

Languages spoken in the United States

The chart below identifies the number of counties where a given language was recorded as being spoken at home (subject to Census confidentiality requirements), as well as the number of U.S. counties where this language was among the top 10 languages in a given county. In addition, the number of counties where each language ranked as the most common, 2nd most common, 3rd most common, etc. is presented.

For example, there were 2,857 counties in the United States where German speakers were recorded, including 2,821 where German ranked among the 10 most common languages spoken in the county. Of those, German was the 2nd most common language in 195 counties, 3rd most common in 1,404 counties, 4th most common in 799 counties, etc.

Total number of “counties” (counties, parishes, independent cities, Census Areas, boroughs) in the United States is 3,141. Totals for rankings may add up to more or less than 3,141 due to ties and counties with less than 10 languages recorded. Some languages were not noted in counties because of Census confidentiality protections. Languages with zero “total” were recorded in the United States, but were not listed within a county due to Census confidentiality protections.

4

Languages that are the most common in at least one county

19

Languages that were recorded in more than 500 counties

192

Languages that placed in the 10 most common in at least one county

772

Counties where the top four languages are, in order:
English,
Spanish,
German,
French
